Profile

Game Developer with 5+ years of Unity and game development experience, building gameplay systems, AI opponents, UI and custom tooling in **Unity** (C#) and **Godot**, with a strong focus on **mobile performance** and maintainability. Shipped Sky Hopper, a 3D puzzle platformer, on Google Play, and most recently built body tracking gesture input for interactive installations.

Skills

Unity3D: Gameplay mechanics, game loops, state machines, user input, cameras, UI, tutorials, AR development and editor tools

Unity Tools: Scriptable Objects, Addressables, JSON, shaders, Cinemachine, particles, WebGL (personal projects)

Performance and Stability: Unity Profiler, Firebase Crashlytics, memory optimization, debugging and unit testing

Multiplayer Games: Realtime multiplayer with PUN2 (Photon Unity Networking), including networked player interactions, matchmaking, rooms and game state sync across clients

Godot: Godot Engine development, specializing in 2D/3D game creation, scripting, asset management and editor tools

Game Design: Player psychology, user experience and game balance applied to design rich, engaging game experiences

Programming: C#, GDScript, Java, Python, Bash and Node.js for game logic, scripting, automation and SSH servers

Version Control Systems: Git and GitHub, following best practices for code management in solo and team projects

Languages: Arabic (native), English (proficient)

Experience

Rayqube Sep 2026 – Oct 2026
Interactive Developer (Contract) *Dubai, UAE*

- **Body Tracking Gesture Input:** Built a Unity 6 gesture recognition system on Orbbec Femto Bolt depth cameras, turning skeleton data into game actions (punches, weaves and ducks) for an interactive installation.
- **Testing and Tuning:** Measured detection accuracy against hand labelled recordings using a record and replay pipeline, then tuned thresholds and filters, cutting false detections by over 70%. Used the Unity Profiler to analyze performance.
- **Reusable Packages and Tooling:** Packaged the camera and gesture systems as reusable Unity packages with editor setup checks, a diagnostics overlay and keyboard simulation for testing without a camera.
- **Applications and Hardware:** Built touchscreen kiosk applications in Unity, connected Arduino based buttons to Unity, and controlled LED fixtures over DMX and Art-Net.

Sabil Systems Inc. Dec 2024 – Present
Software Engineer *Edmonton, Canada*

- **Architected Scalable Game Systems:** Designed robust, extensible architectures in Unity (C#) and Godot (GDScript), converting abstract concepts into technical specifications for long term product lifecycles.
- **Optimization and Stability:** Refactored core gameplay systems for memory efficiency and resolved complex edge cases for competitive multiplayer environments.
- **Profiling and Crash Reporting:** Used the Unity Profiler to analyze performance and **Firebase Crashlytics** for crash reporting.
- **Achievements, Settings and Store Content:** Worked on the achievements system, managed settings with Scriptable Objects and JSON, and delivered remote store content with JSON.
- **UI and Visual Polish:** Engineered responsive, high performance mobile UIs and utilized advanced particle systems and shaders to enhance player feedback and game feel.
- **Pipeline Innovation:** Developed custom Unity based tools and reusable game templates, significantly reducing designer iteration time and streamlining production pipelines.
- **Established Technical Standards:** Authored technical roadmaps and enforced rigorous code review guidelines, ensuring high codebase stability and team wide technical excellence.

Capital Digital Mar 2024 – Dec 2024
Game Developer *Riyadh, Saudi Arabia*

- **Core Loop Engineering:** Developed the foundational gameplay mechanics and main game loop, ensuring high performance synchronization between game state and user input.
- **Dynamic AI Architecture:** Engineered an AI system for player vs computer gameplay, utilizing state machines to create adaptive and challenging opponent behavior.
- **UX Driven Development:** Designed and implemented a responsive UI framework and an interactive tutorial system for intuitive onboarding.

Interactive Future Aug 2023 – Feb 2024
Game Developer *Riyadh, Saudi Arabia*

- **Native Android Integration:** Developed and bridged native Android modules with the game engine to leverage platform specific features and optimize mobile performance.
- **Rapid Prototyping:** Iterated on prototypes to validate game mechanics, translating successful proofs of concept into production ready C# code.
- **Extensible Tooling:** Created custom libraries, plugins, and editor tools that accelerated the internal development cycle and standardized feature implementation.
- **Clean Code Advocacy:** Promoted software design patterns and best practices for high quality, maintainable code.

CTRL A Studios Apr 2022 – Jan 2023
Game Developer *Khartoum, Sudan*

- **Systems Implementation:** Delivered core gameplay features and 2D/3D visual systems, collaborating closely with artists to integrate complex animations, VFX and Cinemachine cameras.
- **Quality Assurance and Support:** Conducted debugging and unit testing to eliminate critical glitches, while providing technical support and documentation for team members.

The Code Effect Dec 2021 – Dec 2022
AR Developer *Khartoum, Sudan*

- **AR Systems Engineering:** Designed and maintained Augmented Reality applications using AR Foundation, used Addressables, and built a local Node.js backend for testing.
- **Optimized AR Interactions:** Wrote efficient code for AR plane and image recognition and UI overlays, ensuring a smooth user experience on mobile hardware.

Projects

Sky Hopper Google Play
Shipped Mobile Game *Unity, C#*

- **Shipped Game:** Designed and shipped a 3D puzzle platformer on Google Play, with swipe based movement and tiles that crumble moments after contact.
- **Levels and Scoring:** Hand crafted 12 levels and built beat the clock scoring of up to 3 stars per level, with spring tiles for shortcuts and collectibles.

AR Cheese Hunt GitHub
Mobile AR Game *Unity, AR Foundation, Android*

- **AR Game Loop:** Built an AR game where the player anchors a character to a detected plane, then drives it with an on-screen joystick to collect cheese that spawns across tracked surfaces in a 60-second scoring loop, iterating the tracking indicator after playtesting.

Education

University of Khartoum 2018
Bachelor of Electrical and Electronics Engineering *Khartoum, Sudan*
